Wear 177 (1994) 213–214

WEAR

Subject Index of Volume 177

Abradability
evaluation of abradability of porous seal materials in a single-pendulum scratch device, 167
Alumina
the influence of humidity and the role of debris in the unlubricated wear of ductile cast iron against alumina, 151
Aluminium–silicon alloys
on wear characteristics of leaded aluminium–silicon alloys, 47
Antiwear
the theory of antiwear for ZDDP at elevated temperature in boundary lubrication condition, 105

Bearings
identification of sixteen dynamic coefficients of two journal bearings from experimental unbalance responses, 63
Boundaries
a model of the dynamics of boundary film formation, 33
Brush
evaluation of subsurface stresses in a thermal mound with application to wear, 15

Carbides
solid particle erosion of hot flame-deposited diamond coatings on cemented carbide, 159
Cavitation erosion
fatigue failure of SUS 304 caused by vibratory cavitation erosion, 129
Ceramics
tribological reaction generated on ceramic–stellite couples under dry sliding contact and water- and oil-lubricated conditions, 139
Circular contact problem
advanced multilevel solution for elastohydrodynamic lubrication circular contact problem, 117
CO_2
the effect of debris chemistry on the debris formation and fretting behaviour of mild steel in CO_2 containing oxygen and water vapour, 195
Concrete
fundamental investigations on concrete wear by high velocity water flow, 55
Contact
thermal contact conductance across Si_3N_4–Si_3N_4 contact, 25
Corrugations
the use of vibration monitoring in detecting the initiation and prediction of corrugations in rolling–sliding contact wear, 175

Debris
microanalysis of debris formed during rotary EDM of titanium alloy (Ti6Al4V) and die steel (T 215 Cr12), 71
the influence of humidity and the role of debris in the unlubricated wear of ductile cast iron against alumina, 151
the effect of debris chemistry on the debris formation and fretting behaviour of mild steel in CO_2 containing oxygen and water vapour, 195
Diamond
the wear mechanisms of impregnated diamond bits, 81
Diamond coatings
solid particle erosion of hot flame-deposited diamond coatings on cemented carbide, 159
Drilling
the wear mechanisms of impregnated diamond bits, 81
Dynamic coefficients
identification of sixteen dynamic coefficients of two journal bearings from experimental unbalance responses, 63
Dynamics
a model of the dynamics of boundary film formation, 33

Elastohydrodynamic lubrication
advanced multilevel solution for elastohydrodynamic lubrication circular contact problem, 117
Electron probe micro-analyser
microanalysis of debris formed during rotary EDM of titanium alloy (Ti6Al4V) and die steel (T 215 Cr12), 71
Erosion
fundamental investigations on concrete wear by high velocity water flow, 55
Erosive wear resistance
mechanical properties of hard metals and their erosive wear resistance, 185

Fatigue
fatigue failure of SUS 304 caused by vibratory cavitation erosion, 129
Finite elements models
finite-elements model for the contact of rough surfaces, 1
Fretting
the effect of debris chemistry on the debris formation and fretting behaviour of mild steel in CO_2 containing oxygen and water vapour, 195
Friction
interpretation of friction and wear properties of MoS_2 coated steel substrates, 93

Hard metals
mechanical properties of hard metals and their erosive wear resistance, 185
Hot flame technique
solid particle erosion of hot flame-deposited diamond coatings on cemented carbide, 159
Humidity
the influence of humidity and the role of debris in the unlubricated wear of ductile cast iron against alumina, 151

Elsevier Science S.A.

Iron
the influence of humidity and the role of debris in the unlubricated wear of ductile cast iron against alumina, 151

Lubrication
the theory of antiwear for ZDDP at elevated temperature in boundary lubrication condition, 105
advanced multilevel solution for elastohydrodynamic lubrication circular contact problem, 117

Microstructure
effect of tempering temperature on microstructure and sliding wear property of laser quenched 4Crl3 steel, 203
Molybdenum
interpretation of friction and wear properties of MoS_2 coated steel substrates, 93

Oil
tribological reaction generated on ceramic–stellite couples under dry sliding contact and water- and oil-lubricated conditions, 139
Oxygen
the effect of debris chemistry on the debris formation and fretting behaviour of mild steel in CO_2 containing oxygen and water vapour, 195

Particle erosion
solid particle erosion of hot flame-deposited diamond coatings on cemented carbide, 159

Qualitative energy dispersive spectroscope
microanalysis of debris formed during rotary EDM of titanium alloy (Ti6Al4V) and die steel (T 215 Cr12), 71

Reynolds equation
advanced multilevel solution for elastohydrodynamic lubrication circular contact problem, 117
Rock
the wear mechanisms of impregnated diamond bits, 81
Rolling–sliding wear
the use of vibration monitoring in detecting the initiation and prediction of corrugations in rolling–sliding contact wear, 175
Rotary EDM
microanalysis of debris formed during rotary EDM of titanium alloy (Ti6Al4V) and die steel (T 215 Cr12), 71
Rotating electrode
microanalysis of debris formed during rotary EDM of titanium alloy (Ti6Al4V) and die steel (T 215 Cr12), 71
Rotor
evaluation of subsurface stresses in a thermal mound with application to wear, 15
Rough surfaces
finite-elements model for the contact of rough surfaces, 1

Scanning electron microscope
microanalysis of debris formed during rotary EDM of titanium alloy (Ti6Al4V) and die steel (T 215 Cr12), 71
Scratch device
evaluation of abradability of porous seal materials in a single-pendulum scratch device, 167
Seal materials
evaluation of abradability of porous seal materials in a single-pendulum scratch device, 167
Silicon nitride
thermal contact conductance across Si_3N_4–Si_3N_4 contact, 25
Sliding contact
tribological reaction generated on ceramic–stellite couples under dry sliding contact and water- and oil-lubricated conditions, 139
Sliding wear
effect of tempering temperature on microstructure and sliding wear property of laser quenched 4Crl3 steel, 203
Steel
interpretation of friction and wear properties of MoS_2 coated steel substrates, 93
the effect of debris chemistry on the debris formation and fretting behaviour of mild steel in CO_2 containing oxygen and water vapour, 195
Stellite
tribological reaction generated on ceramic–stellite couples under dry sliding contact and water- and oil-lubricated conditions, 139
Stress
evaluation of subsurface stresses in a thermal mound with application to wear, 15
SUS 304 stainless steel
fatigue failure of SUS 304 caused by vibratory cavitation erosion, 129

Tempering
effect of tempering temperature on microstructure and sliding wear property of laser quenched 4Crl3 steel, 203
Thermal contact conductance
thermal contact conductance across Si_3N_4–Si_3N_4 contact, 25
Thermal mound
evaluation of subsurface stresses in a thermal mound with application to wear, 15
Thermoelastic stress
evaluation of subsurface stresses in a thermal mound with application to wear, 15

Unbalance responses
identification of sixteen dynamic coefficients of two journal bearings from experimental unbalance responses, 63

Vibration monitoring
the use of vibration monitoring in detecting the initiation and prediction of corrugations in rolling–sliding contact wear, 175

Water
tribological reaction generated on ceramic–stellite couples under dry sliding contact and water- and oil-lubricated conditions, 139
Water flow
fundamental investigations on concrete wear by high velocity water flow, 55
Water vapour
the effect of debris chemistry on the debris formation and fretting behaviour of mild steel in CO_2 containing oxygen and water vapour, 195

ZDDP
the theory of antiwear for ZDDP at elevated temperature in boundary lubrication condition, 105
